Summary

BTech ICT student with CGPA 9.11/10, specializing in Backend Development using Java and Node.js. Built scalable systems across fintech, cybersecurity, and AI domains with hands on experience in REST APIs, authentication, database optimization, and real time event processing.

Education

Pandit Deendayal Energy University — July 2023 – May 2027
B.Tech in Information and Communication Technology, CGPA: 9.11/10 — Gandhinagar, India

Podar International School, Chandkheda — 2021 – 2022
Higher Secondary Certificate, CBSE Science (83.5%)

Podar International School, Gandhinagar — 2019 – 2020
Secondary School Examination, CBSE (90%)

Projects

VaultPay – Full Stack Fintech Wallet System — 2025
React, Node.js, Express, MongoDB Atlas, Redis — Backend | Frontend

- Engineered a secure digital wallet enabling atomic peer to peer transactions using MongoDB replica set transactions.
- Implemented JWT based authentication and RBAC to ensure secure and role controlled access.
- Designed and optimized RESTful APIs for wallet operations, reducing response latency and improving scalability.
- Integrated Redis based rate limiting to handle high concurrency and prevent API abuse.

AttackSimulator – Cyber Attack Simulation Platform — 2026
Node.js, Express, React, MongoDB, Twilio API — Repository

- Developed a cybersecurity platform simulating phishing and social engineering attacks based on CREST DATA problem statement.
- Built backend event tracking system to log and analyze real time user interactions with attack links.
- Integrated Twilio API to automate phishing simulations via SMS, WhatsApp, enabling large scale testing.
- Designed analytics dashboard to evaluate click rates and user vulnerability patterns.

Agentic AI System – Autonomous Task Execution Platform — 2026
Node.js, Express, React, LLM APIs — Backend | Frontend

- Built an agent based AI system capable of executing multi step tasks using LLM driven decision making.
- Designed backend orchestration layer to manage agent workflows, tool usage, and state persistence.
- Integrated external APIs and tools enabling dynamic task execution and response generation.
- Implemented modular architecture for scalable addition of new agents and capabilities.
- Developed frontend interface for user interaction and real time task monitoring.

Virtual Memory Simulator — 2024
HTML, CSS, JavaScript — Repository

- Implemented FIFO, LRU, and Optimal page replacement algorithms to simulate virtual memory management.
- Visualized page faults, hit ratio, and memory utilization for different workloads.
- Demonstrated performance tradeoffs between page replacement strategies through interactive simulation.

Technical Skills

Languages: Java, C++, Python, JavaScript
Frontend: React.js, HTML, CSS
Backend: Node.js, Express.js, REST API Development
Tools: Git, Redis
Databases: MongoDB, MongoDB Atlas, MySQL

Achievements and Leadership

Hackathon Winner – BREACH FinTech Hackathon — 2026

- Built AttackSimulator AlphaCore, a cybersecurity platform simulating phishing attacks with real time user interaction tracking.

Head of Creative Marketing, IEEE Women in Engineering, PDEU — 2024 – Present

- Led digital campaigns reaching 500+ students and increased engagement by 35% through structured content strategy.

Certifications

Udemy Web Dev Bootcamp | NPTEL C++ | MathWorks Signal Processing | freeCodeCamp Responsive Web
